

UX Annotations

Header Collaboration Fun

Annotations:

Version 1:

- The thought behind this is to clean up the current header and condense what is existing. The header is responsive and fits within Zurb Foundations standards.

- 1 - Top left: Added the Registry and Back-stage sections to lead the user to those sites.
- 2 - Under the top bar on the left side is all the utility links plus Deals and Gift Cards.
- 3 - Search is now on the top right and the logo becomes centered to feature the Brand.
- 4 - All FOBs remain.
- 5 - Account and Lists appear on the left side of the bag.

Note: all of these navigations could be in a fixed position.

Initial State

Flyout

Shrinks as I scroll

Annotations:

Version 2:

- This version just has a different order on the top and removes the "backstage" and "registry" at the top

- Search is now on the top left and the logo becomes centered to feature the Brand.

- Under the top bar on the right side is all the utility links plus Deals and Gift Cards.

- All FOBs remain.

- Account and Lists appear on the left side of the bag.

1 - To introduce a filter in the navigation, the thought is to show what type of home you'd like to shop for and currate products for that style. We can also try this with color and size. (look at shop-tique as an example)

Initial State

Shrinks as I scroll

Annotations:

Version 3:

- This version puts search before all the FOBs.

- As the user scrolls, the bar would go into a fixed position and be a sticky navigation. The logo drops out of the frame.
